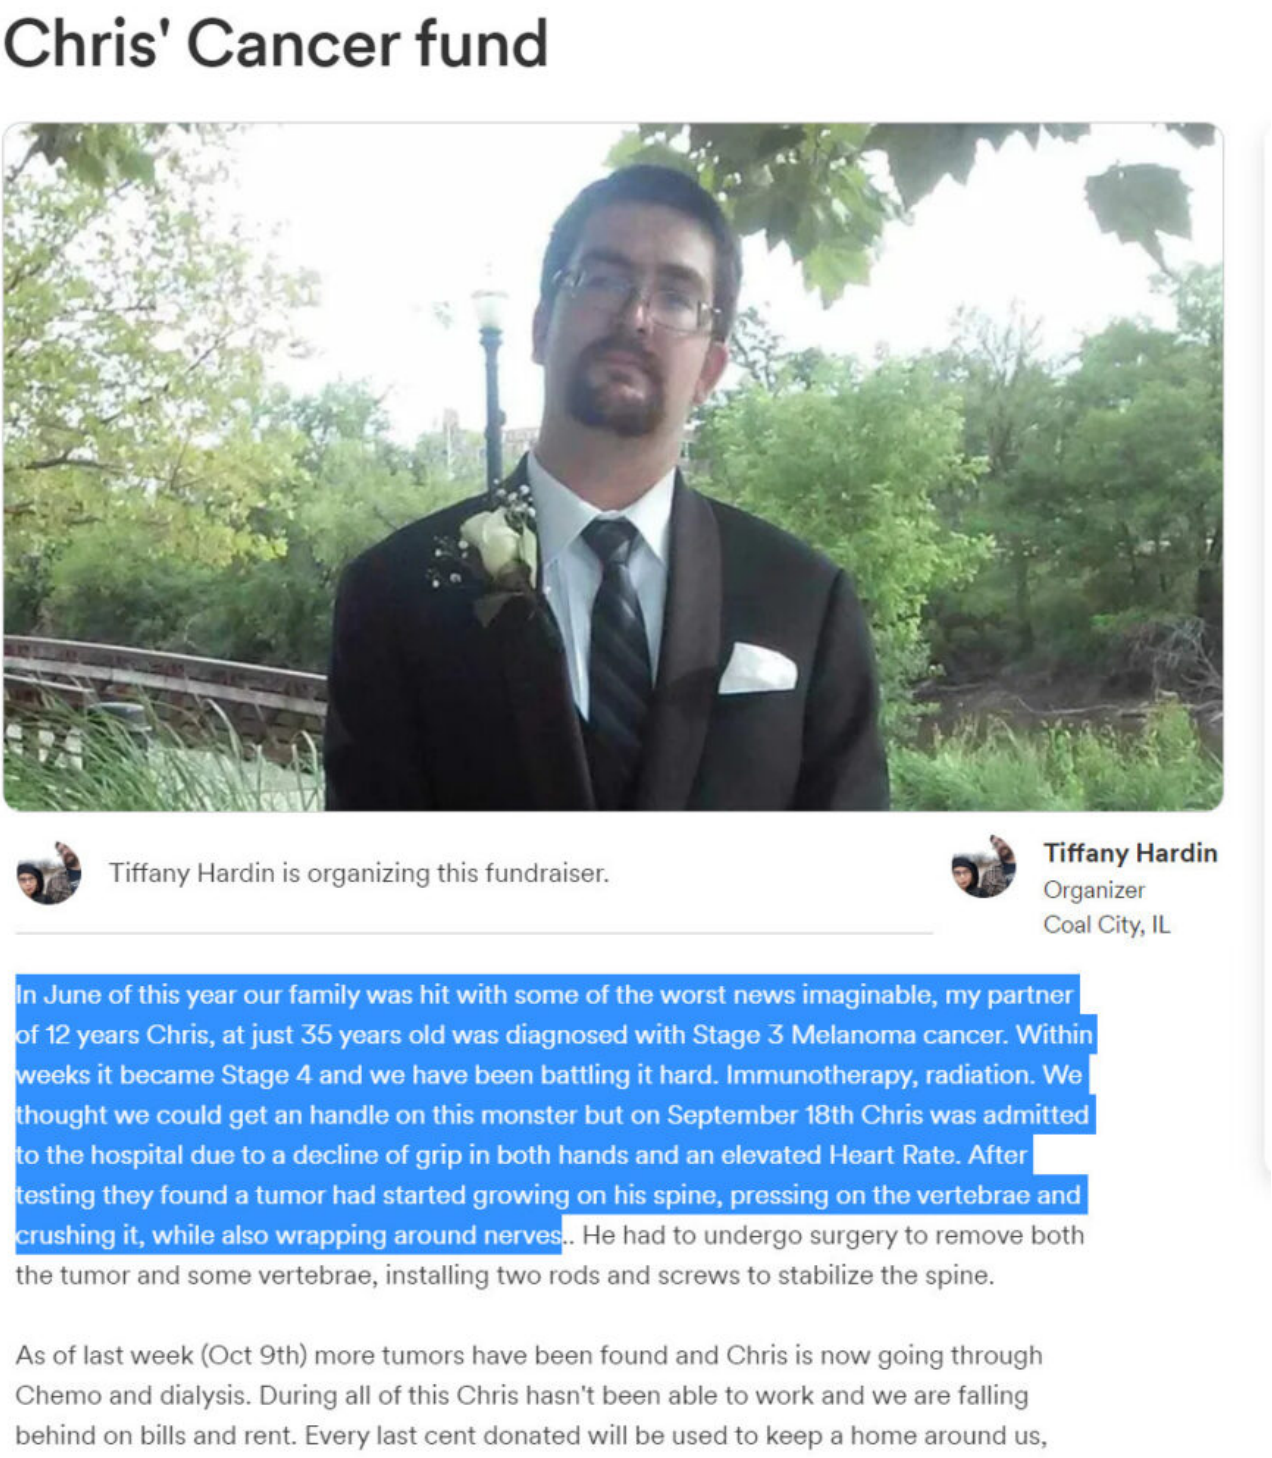
10 listopada 2023 r. – Coal City, IL – W czerwcu 2023 r. u 35-letniego Chrisa Hardina zdiagnozowano czerniaka w stadium 3, który szybko przeszedł do stadium 4, nie reagował na radioterapię ani immunoterapię i osiągnął stopień 4 z guzem „rosnącym na jego ciele". kręgosłupa, naciskając na kręgi i miażdżąc je, jednocześnie owijając nerwy"



1 listopada 2023 r. – Pod koniec czerwca 2023 r. u 33-letniego Etai Davida Gamliela zdiagnozowano czerniaka z przerzutami. Nie reagował on na radioterapię ani immunoterapię. Rak rozprzestrzenił się na rdzeń kręgowy, zabierając mu zdolność chodzenia, a następnie dalej w górę kręgosłupa, aż odebrał mu zdolność oddychania.

K Gamliel is organizing this fundraiser to benefit Melanoma Research Foundation. Learn more

Created 5 d ago • Medical

In late June, our dearly beloved brother, Etai David Gamliel, was diagnosed with Metastatic Melanoma. After going to the emergency room for a severe headache, the doctors had found that the tumors had developed in the temporal lobe of his brain. Etai, with his family, desperately tried to fight this disease, trying every treatment available. Etai was treated at Johns Hopkins Hospital, one of the country's top cancer research centers.

Etai fought tirelessly everyday, going through radiation and immunotherapy. Unfortunately, the cancer he suffered from was very aggressive and known treatment was not working. A young man, at 33 years old, with everything to live for, was robbed of the rest of his life from a disease that took no prisoners. The cancer soon spread to his spinal cord taking away his ability to walk. It then, rapidly moved further up his spine taking his hands, and eventually his ability to breath. Regardless of all these factors, Etai never gave up or wanted to show weakness in the face of impossible odds. After 4 long months of a taxing emotional and physical rollercoaster, Etai took his last breath on November 1, 2023.

25 października 2023 r. – Brazylia, IN – 28-letni Wesley Miller miał zostać usunięty z ramienia i brzucha. Zamiast tego zdiagnozowano u niego czerniaka czwartego stopnia ze zmianami w mózgu, płucach, wątrobie i kościach.

Help Father of 3 fighting Adv Stage IV Melanoma

Samantha Swayze is organizing this fundraiser on behalf of Wesley Miller.

Life is crazy.
Hi everyone, I want to thank you for stopping in to donate, read, share, and/or send prayers.

On September 25th, 2023, Wesley Miller, 28 year old Father of Sophia, Audrey, and Jack. Went to have what we thought were cysts removed from his arm and abdomen.
The surgeon, myself, along with 4 other nurses surrounded the recovery room, listening to the Doctor, tell the man that made me a mother, a wife and so much more that Wesley has Cancer. He didn't know what kind, all he said was "could be skin, colon, liver or lung"

October 6, 2023, I am holding Wesley's hand, because today he is being fitted for a mask to hold his head completely still during radiation ....the radiologist goes over his 2nd MRI and his PET scan. I held out for hope as far as good news was concerned. Maybe the surgery cut all the cancer out. Maybe the radiologist could have swung a sledgehammer to our knees?
Wesley and I already brought to our knees just days ago. Radiologist hammer came down to take the rest of our legs leaving us face down on the floor when I asked how long does Wesley have? "Give or take 6 months, unfortunately this was not caught early." Wesley has Stage IV Metastatic Melanoma, with a 3 - 6 month life expectancy (terminal).
It has spread to his: Brain, lungs, liver, and bones.
What we thought were just cysts, turned out to be cancer, what we thought would be a quick in and out procedure has us waiting anxiously for answers, for a plan of action, for

October 25th, 2023 by Samantha Swayze, Organizer

Hey there everyone! Just an update. Wesley had radiation on his brain early morning 10/17/2023 so far he seems to be doing okay. In a bit of pain all over, mainly his bones, headaches, and a pretty bad rash after his first round of immunotherapy. We took off

[8 października 2023 r.](#) – Long Beach, Kalifornia – u 32-letniej Randi Young zdiagnozowano czerniaka w stadium 4. 21 września

2023 r. Zmarła 2 tygodnie później, 8 października 2023 r.

Sarah Barnes is organizing this fundraiser on behalf of Nicholas Young.
Created September 21st, 2023

Randi has just been diagnosed with Stage 4 Metastatic Melanoma. She is 32 years old. They have found tumors in her brain, spine, stomach, liver and hips. Doctors have told her that it is not curable but that treatment may help to extend her life for about a year. As you can imagine her families lives have been absolutely turned upside down.

Randi and her husband of 11 years share their 8 year old son Jackson and her 17 year old stepson Atreyu.

Randi and Nick have a love story for the ages. Although they were very young, they knew immediately that they were meant to be together and despite being told it was a huge

October 8th, 2023 by Sarah Barnes, Organizer

Randi passed away this morning at 7am MDT on the dot (always punctual) in our home. I held her hand all night because it was important that she wasn't alone when the time came. I listened to her breathing all night and cuddled her for a period of time, and told her how much she meant to me but if she wanted to go see Nana and Star, I would join them as soon as I could.

30 sierpnia 2023 r. – San Clemente, Kalifornia – 22-letnia Hailey Pressnell kończyła studia magisterskie, gdy zdiagnozowano u niej **czerniaka** w stadium 3B . „rak już zaczął się rozprzestrzeniać”

Help 22 yr old Hailey overcome cancer

Hailey Pressnell is organizing this fundraiser.

Hello,

I'm a 22-year-old who was on the cusp of an exciting new chapter before life took an unexpected turn. This summer was meant to be the culmination of my master's degree journey, and I had exciting plans to move to New Zealand in September 2023 to embark on a new adventure. A job at a geotechnical engineering firm awaited me, promising a future full of possibilities.

Then came August, a month that changed everything. I was confronted with a diagnosis that none of us ever anticipates – malignant melanoma (skin cancer). Immediate surgery was required, leading to two wide excision surgeries on my back and a sentinel lymph node biopsy, during which two of my lymph nodes were removed. The results were not what I had hoped for – one of those lymph nodes tested positive for melanoma, indicating that the cancer had already begun to spread.

At the moment, I'm facing the challenges of Stage 3B skin cancer, a reality that has put a pause on life. Instead of gearing up for exciting endeavors, I find myself navigating the complexities of treatments, uncertainty, and medical bills.

11 sierpnia 2023 r. – Weedsport, Nowy Jork – 23-letnia Mya Maloof zachorowała

na czerniaka w stadium 4 podczas studiów na Uniwersytecie w Nazareth. Kiedy w maju ukończyła studia magisterskie z logopedii, dowiedziała się, że jej rak się rozprzestrzenił. Zmarła 11 sierpnia 2023 roku w wieku 23 lat. Jej 43-letnia mama również ma raka w czwartym stadium.

View/Sign Guestbook

Mya Maloof, 23, of Weedsport, passed away August 11, 2023, peacefully at her home surrounded by her loving family. She was born in Syracuse, daughter of Joseph Maloof and Maria Vanetti Maloof. She loved camping, family trips, spending time with Ty and her friends, and field hockey. She had just recently graduated from Nazareth University with a master of science degree. She loved the game of field hockey and wanted to follow the footsteps of the great coaches she had along the way by coaching a team one day. She will always be our courageous fighter with a kind heart.

She is predeceased by maternal grandfather, Michael R. Vanetti (2019) .

She is survived by her parents, Joseph and Maria Maloof, brother, Jacob Maloof, boyfriend, Tiernan Konopasek, Maternal grandmother, Carol Vanetti,as well as several aunts, uncles, cousins, and friends.

Mother (43) Daughter (23) Fighting Stage 4

UPDATE:
Thank you everyone for your very generous donations to the Maloof family GoFundMe. It is with very heavy hearts that we share that sweet Mya has lost her battle with cancer, after a very courageous fight. https://www.catoredcreek.com/obituary/mya-maloof Please keep the Maloof family in your thoughts, and your prayers coming for her mother Maria, as she continues to find strength and courage to keep fighting this terrible disease.

Maria, and her husband, Joe, have two children, Mya, and Jacob. While Mya was attending Nazareth College, she was diagnosed with Melanoma. During her final year at Nazareth, where she had remarkable grades and played field hockey, Mya was also receiving treatment for her cancer. Mya graduated from Nazareth College with a Master's in Speech Pathology in May 2023 and moved to Albany to begin her career when she found that her cancer had spread. Mya recently moved back home with her family to begin receiving Hospice care.

24 lipca 2023 – Louisville, Kolorado – 26-letni Caleb Chastain zmarł po walce z agresywnym czerniakiem. Był uniwersyteckim sportowcem, sprinterem, płotkarzem, lekkoatletą, a także zapalonym narciarzem, myśliwym, wędkarzem, kolarzem górskim, biegaczem przełajowym, ultramaratończykiem i alpinistą.

Beloved husband, son, brother, and friend, Caleb Joseph Chastain of Fairplay, Colorado passed away from this life on July 24, 2023 at his parents' home in Louisville, Colorado. Caleb was 26 years old and is survived by his wife Kendall, mother Cally, father Rick, brother Ben, and puppy Buckwheat.

Caleb attended Western Colorado University in Gunnison, CO, where he was a sprinter and hurdler ont he Track and Field team, and graduated with a Bachelor of Arts in Communications in 2019. In 2016, Caleb and Kendall met in a shared class at Western and began dating shortly thereafter. They were married in Buena Vista, Colorado in May, 2021 and moved to Fairplay later that year.

Caleb was known for his love of the outdoors. From his earliest years, he was an avid skier, hunter, fisherman, mountain biker, trail runner, ultramarathoner, and mountain climber. HIs adventures brought him everywhere from the forests of the Pacific Northwest, through the Utah deserts, the the shores of the Atlantic on the beach at his grandparents' home in Maine. But his favorite place to be was in the high country of Colorado. Caleb summited 42 of Colorado's fourteeners and completed in numerous mountain bike and trail rumning races throughout the region, including a finish at the Leadville 100 Mountain Bike Race in 2019. More than anything, he enjoyed sharing his favorite places, activities, and time wtih his favorite people - his wife, family friends, and dog.

This fundraising will help Kendall with medical bills as she took the time to take care of her husband and gave him incredible love and support throughout his courageous battle against melanoma.

Marine Fighting Metastatic Melanoma

Team fundraiser Created July 21st, 2023

Bre Crowder and 3 others are organizing this fundraiser on behalf of robert stokes.

Please help us bring awareness to metastatic melanoma, and all of the prayers along with help to raise funds for Robbi Stokes. He is a 35-year-old veteran, 3rd battalion, 4th Marines of the United States of America, who served 26 months in Afghan, Helmand Province -- meaning he knows how to put up a fight!

Robbi is a healthy, fun-loving guy who does manatee and scuba diving tours at Bird's Underwater in Crystal River, FL. As his cousin and a nurse practitioner, I noticed he had lost a lot of weight over a few months and urged him to go to the doctor to get lab work. His primary care doctor diagnosed him with type 2 diabetes which was very odd to me because his diet is not terrible and he is very active. He buckled down and got the diabetes under control, but something in his body still didn't quite feel right. After several tests and scans, they diagnosed him with Stage 4 metastatic melanoma, a tumor was found between his pancreas and liver which they believe has caused type 2 diabetes and there is also a spot on his lung.

born. She is quite literally who I would aspire to be, even at only 22 years old.

It was June 14th, 2023. We knew she had been at the hospital for chest pains. We also knew that the same week she had located several lumps all over her body, but had not yet been fit in for an ultrasound appointment. (She didn't have an established family doctor yet, as she had left home in BC to move to Calgary in March.)

The minute Kaylee called crying from the hospital informing us they had found lesions in her lungs was what we thought would be the scariest day of our life. Mom and I dropped everything immediately and drove overnight to Calgary, and our Dad booked a flight the next morning. We were wrong though, that wasn't the scariest or the worst day... it kept getting worse. By the end of that day, the hospital had found more lesions - in her liver, heart, and brain. Absolutely not what anyone could ever have wanted to discover. We knew then that there was a high likelihood of cancer, but there were a ton more tests to be done first, and what seemed like a cruel lifetime of waiting.

CT scans, MRIs, biopsies, and a lot of anxious waiting led us to a diagnosis we could have never imagined. Stage 4 Metastatic Melanoma.

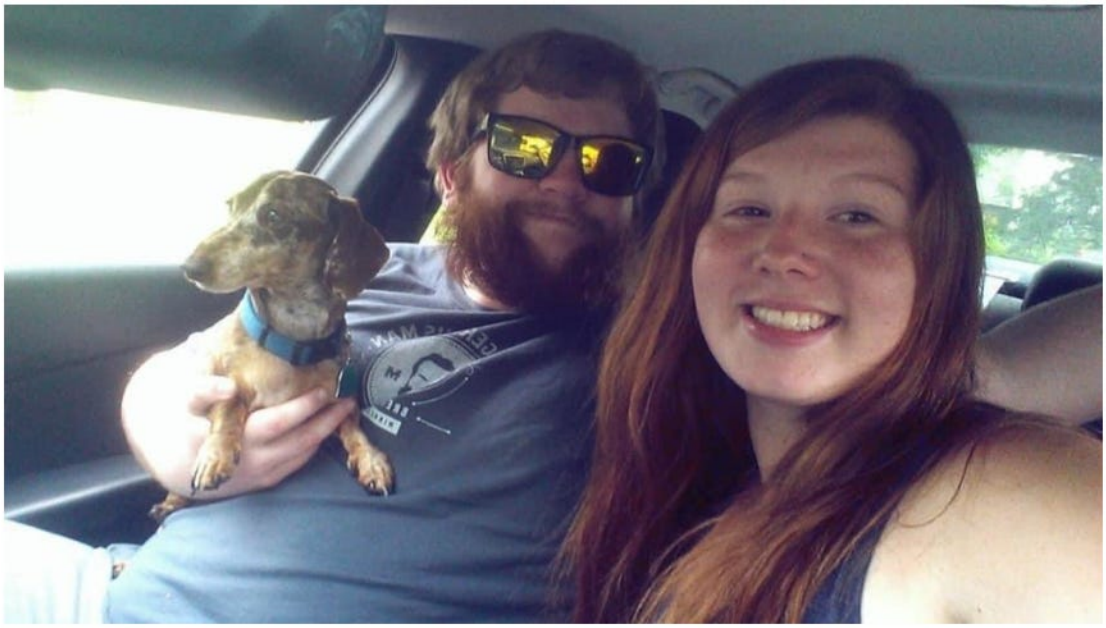
13 czerwca 2023 r. – Ham Lake, Minnesota – 28-letnia Kaylah Eliabeth Stadler-Foss w wieku 22 lat zachorowała na czerniaka, ale była w remisji. Wiosną 2022 r. ukończyła szkołę pielęgniarską. W kwietniu 2023 r. czerniak powrócił i rozprzestrzenił się do mózgu. Po „zaciętej 10-tygodniowej bitwie” zmarła 13 czerwca 2023 r.



If you knew Kaylah, you know she had the biggest heart, kindest soul, and most contagious smile! Along with being the greatest human on the planet, she had been fighting cancer since she was first diagnosed at 22 years old. She had been in remission ever since, however, the last few months things had taken a drastic turn. After dealing with pain, nausea, and dizziness it was found at the beginning of April the cancer had come back and spread to her brain. The cancer had come back more aggressive and did not respond to any treatments. Sadly, after a fierce 10-week battle, on June 13th, 2023, we lost our beloved Kaylah to cancer. She passed peacefully at Unity Hospital surrounded by all of her family and loved ones. We miss her beyond words and selfishly we wish she was still here in body with us. Forever 28.

Now to brag a little bit about Kaylah! Though the past few years have been filled with heartbreak that not one person should have to endure, she has remained the most positive ray of sunshine you could know. Her mom passed away when she was just a teenager and then diagnosed with cancer just a few years later. During this time she met the love of her life Travis. She then fought her cancer while also living her life. She went to nursing school to fulfill her passion for caring for others and just graduated in the spring of 2022! We are so proud of her for fighting, learning, caring, working, and loving! 2022 was such a happy year because Kaylah and Travis got married in September. She truly has accomplished so much in such a short amount of time. Kaylah we love you!

28 maja 2023 r. – Ludowici, Georgia – U 25-letniej Savannah Dollins w czasie ciąży zdiagnozowano czerniaka w stadium 4, który rozprzestrzenił się na pierś, płuca, wątrobę i inne miejsca.

Savannah Dollins fight against cancer

Malissa Legleiter is organizing this fundraiser.

May 28th, 2023

Savannah is 25 years old and a mama of a 1 1/2 year old. She was just told at her doctor appointment that she has advance stage 4 melanoma, that has spread to some major organs. Savannah will not be able to work any longer. She has to start her treatments asap!

On Monday, March 20th 2023 I woke up excited to find out the gender of our new baby, Instead I was admitted for a long 3 days of testing and biopsies.
Today we found out ITS A GIRL @, but we also got all of my test results back. I have stage 4 melanoma, that has spread to my breast, lung, liver, and other places. I also found out I will have to be induced Monday night or Tuesday morning because the treatment is too harsh for the baby and have to start asap. This is the hardest thing life has yet to throw at me. It sucks feeling your kicks knowing you're perfectly healthy just for all of it to be taken away. You've waved at mommy every ultrasound appointment, but I now know that it was just you telling us goodbye, your job is done. You saved your mommy's life without you, I would've never known I had cancer. I'm so sorry I couldn't save yours. E we love you so much already

5 stycznia 2023 r. – Suffern, Nowy Jork – 24-letnia Bryonna J. Chapman została przyjęta do szpitala w lipcu 2022 r. w 34. tygodniu ciąży, ponieważ stwierdzono u niej 10-centymetrowy guz zapadający się w jedno z jej płuc. Zdiagnozowano u niej czerniaka w czwartym stadium, co oznacza, że wystąpiły przerzuty na całym ciele, w tym na łożysko i prawdopodobnie na dziecko. Miała bardzo niebezpieczne cesarskie cięcie. Zmarła 5 stycznia 2023 r.

Shannon McComb is organizing this fundraiser on behalf of Zack Killmer.
Created July 14th, 2022

Bryonna is 23 years old. A few weeks ago she was admitted to the hospital at 34 weeks pregnant because they found a 10cm mass collapsing one of her lungs. She was diagnosed with stage 4 melanoma, meaning it had metastasized all over her body, including to her placenta and possibly to the baby. Because of the pressure of the mass, collapsed lung, and baby, she was in incredible pain and having difficulty breathing. She underwent an incredibly dangerous c-section and was told it was likely she would not make it through the procedure. Bryonna and her baby both came out fighting. The baby went to the NICU and is doing very well.

Moje podanie…

Szczepionki mRNA firmy Pfizer & Moderna przeciwko COVID-19 powodują „turbonowotwory”: niezwykle agresywne nowotwory, które pojawiają się w późnym stadium, szybko rosną, agresywnie się rozprzestrzeniają, są oporne na konwencjonalne metody leczenia i mają bardzo złe rokowanie, a diagnoza prowadzi do śmierci, zwykle trwającej od 6 do 12 miesięcy lub mniej.

Pierwsze prace badawcze zaczynają już wspominać o „turbo raku” i sugerują potencjalne mechanizmy. W najbliższej przyszłości

napiszę o tym osobny stos.

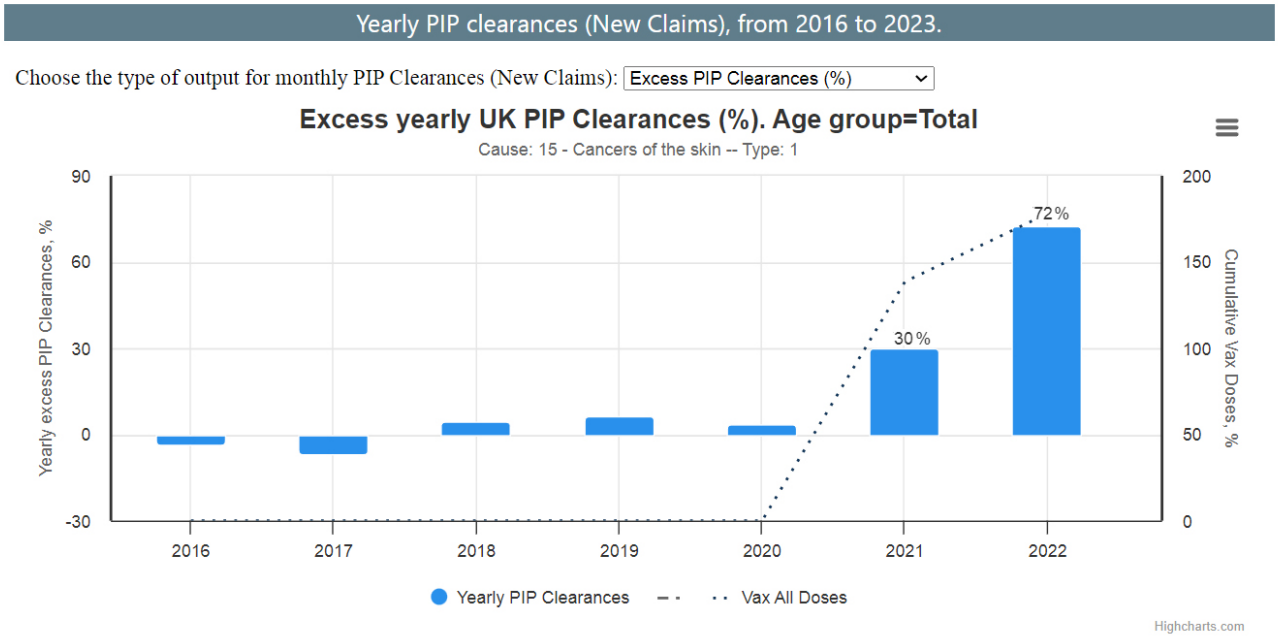
Pięć najczęstszych nowotworów turbo to: chłoniak, mózg (glejak wielopostaciowy), pierś (zwykle potrójnie ujemny), okrężnica i płuca.

Pierwszą dziesiątkę uzupełniają: białaczki, czerniaki, mięsaki, komórki jąder i nerek.

Szczególna wzmianka dotyczy nowotworów wątroby i dróg żółciowych, jajnika i szyjki macicy.

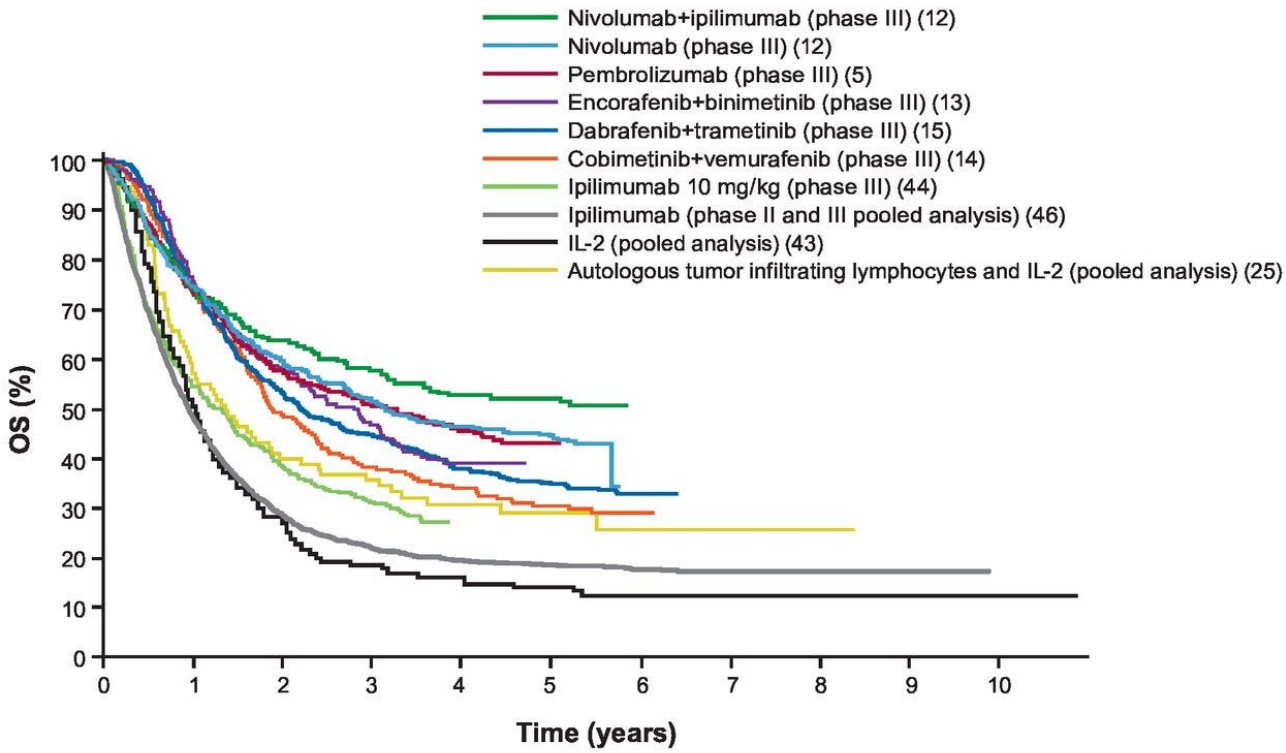
Skąd wiemy, że od czasu wprowadzenia szczepionek liczba przypadków czerniaka gwałtownie wzrosła?

Dane brytyjskiego rządu dotyczące niepełnosprawności pokazują 72% wzrost niepełnosprawności spowodowanej rakiem skóry w 2022 r. ([źródło](#)):



Jedyną kategorią, w której odnotowano większy wzrost w tym zbiorze danych, była „nieznana kategoria podstawowa”.

Nowe osiągnięcia w immunoterapii znacząco poprawiły długoterminowe rokowanie w przypadku czerniaka z przerzutami (źródło 2020 Michielin i wsp .):



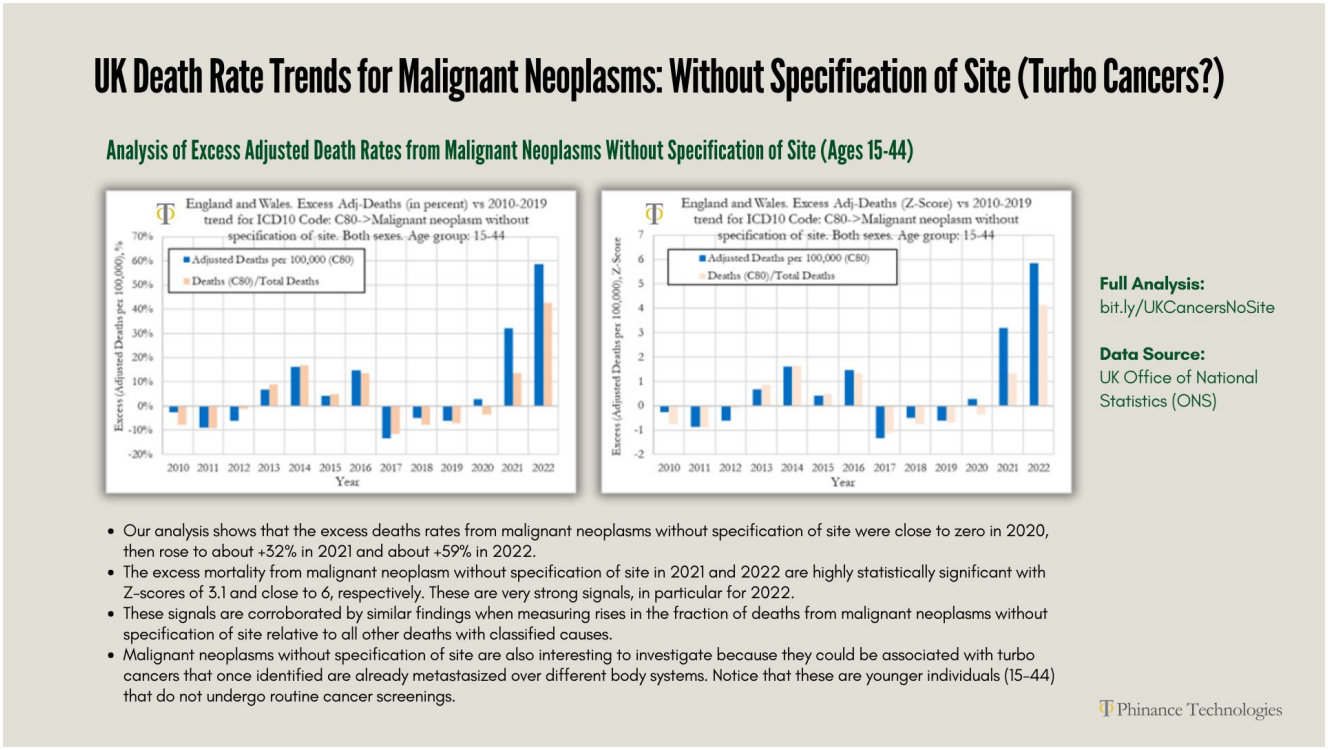
Wydaje się jednak, że czerniaki Turbo Cancer w ogóle nie reagują na immunoterapię lub terapię celowaną.

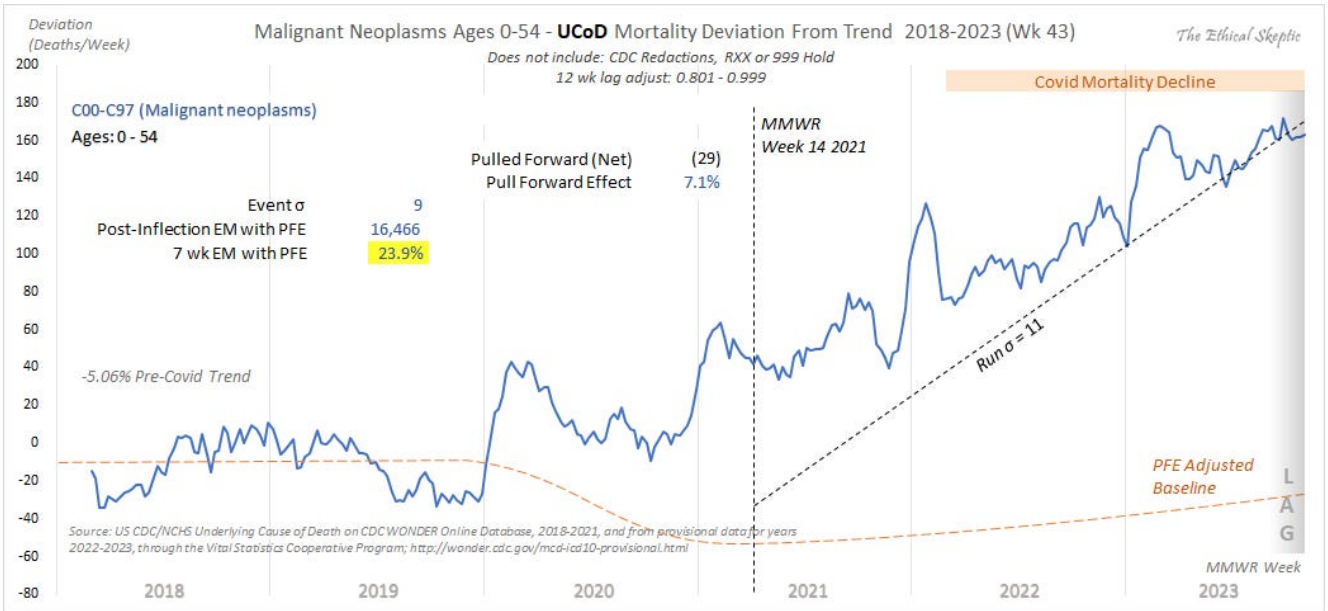
Potrzebujemy pilnych badań w tej dziedzinie, ponieważ onkolodzy nie oferują pacjentom niczego wartościowego.

Pacjentom z czerniakiem w schyłkowym stadium należy zaproponować:

- **Protokoły wysokich dawek iwermektyny**
- **Protokoły z dużą dawką fenbendazolu lub mebendazolu**
- **Protokoły wysokich dawek melatoniny**

Ponieważ śmiertelność z powodu Turbo Raka rośnie!





10 listopada 2023 r. – Coal City, IL – W czerwcu 2023 r. u 35-letniego Chrisa Hardina zdiagnozowano czerniaka w stadium 3, który szybko przeszedł do stadium 4, nie reagował na radioterapię ani immunoterapię i osiągnął stopień 4 z guzem „rosnącym na jego ciele". kręgosłupa, naciskając na kręgi i miażdżąc je, jednocześnie owijając nerwy.

1 listopada 2023 r. – Pod koniec czerwca 2023 r. u 33-letniego

Etai Davida Gamliela zdiagnozowano czerniaka z przerzutami. Nie reagował on na radioterapię ani immunoterapię. Rak rozprzestrzenił się na rdzeń kręgowy, zabierając mu zdolność chodzenia, a następnie dalej w górę kręgosłupa, aż odebrał mu zdolność oddychania.

25 października 2023 r. – Brazylia, IN – 28-letni Wesley Miller miał zostać usunięty z ramienia i brzucha. Zamiast tego zdiagnozowano u niego czerniaka czwartego stopnia ze zmianami w mózgu, płucach, wątrobie i kościach.

8 października 2023 r. – Long Beach, Kalifornia – u 32-letniej Randi Young zdiagnozowano czerniaka w stadium 4. 21 września 2023 r. Zmarła 2 tygodnie później, 8 października 2023 r.

3 października 2023 r. – Holiday, Floryda – W lipcu 2022 r. u 34-letniego Joshuy Gonzaleza zdiagnozowano czerniaka na plecach, jednak choroba powróciła w październiku 2023 r. i obecnie jest w stadium 4.

30 sierpnia 2023 r. – San Clemente, Kalifornia – 22-letnia Hailey Pressnell kończyła studia magisterskie, gdy zdiagnozowano u niej czerniaka w stadium 3B. „rak już zaczął się rozprzestrzeniać”

11 sierpnia 2023 r. – Weedsport, Nowy Jork – 23-letnia Mya Maloof zachorowała na czerniaka w stadium 4 podczas studiów na Uniwersytecie w Nazareth. Kiedy w maju ukończyła studia magisterskie z logopedii, dowiedziała się, że jej rak się rozprzestrzenił. Zmarła 11 sierpnia 2023 roku w wieku 23 lat. Jej 43-letnia mama również ma raka w czwartym stadium.

3 sierpnia 2023 r. – Boonville, IN – w lutym 2023 r. u 26-letniego Joshuy Schmetta zdiagnozowano czerniaka w stadium 3. Pomimo leczenia rozprzestrzenił się do płuc i obecnie znajduje się w stadium 4.

24 lipca 2023 – Louisville, Kolorado – 26-letni Caleb Chastain zmarł po walce z agresywnym czerniakiem. Był uniwersyteckim

sportowcem, sprinterem, płotkarzem, lekkoatletą, a także zapalonym narciarzem, myśliwym, wędkarzem, kolarzem górskim, biegaczem przełajowym, ultramaratończykiem i alpinistą.

21 lipca 2023 r. – Lakeland, Floryda – 35-letni Robbi Stokes jest żołnierzem amerykańskiej piechoty morskiej, który organizuje wyprawy nurkowe na manaty i nurkowanie na Florydzie. Zdiagnozowano u niego czerniaka w stadium 4 z guzem pomiędzy trzustką a wątrobą oraz plamką na płucu.

6 lipca 2023 – Niemcy – U 23-letniej mistrzyni świata w piłce ręcznej Niemiec Liv Suchting zdiagnozowano guza mózgu, który okazał się czerniakiem czwartego stopnia.

29 czerwca 2023 r. – Chilliwack, Kolumbia Brytyjska – u 22-letniej Kaylee Engle zdiagnozowano zmiany na całym ciele, w płucach, wątrobie, sercu i mózgu. Zdiagnozowano u niej czerniaka czwartego stopnia

13 czerwca 2023 r. – Ham Lake, Minnesota – 28-letnia Kaylah Eliabeth Stadler-Foss w wieku 22 lat zachorowała na czerniaka, ale była w remisji. Wiosną 2022 r. ukończyła szkołę pielęgniarską. W kwietniu 2023 r. czerniak powrócił i rozprzestrzenił się do mózgu. Po „zaciętej 10-tygodniowej bitwie” zmarła 13 czerwca 2023 r.

28 maja 2023 r. – Ludowici, Georgia – U 25-letniej Savannah Dollins w czasie ciąży zdiagnozowano czerniaka w stadium 4, który rozprzestrzenił się na pierś, płuca, wątrobę i inne miejsca.

4 maja 2023 r. – Blue Earth, Minnesota – 32-letni Jon Trasamar jest zawodowym golfistą biorącym udział w PGA Tour, u którego zdiagnozowano czerniaka, który szybko przeszedł do etapu 4.

24 kwietnia 2023 r. – Edmonton, AB – u 32-letniego Davida Kosa w grudniu 2022 r. zdiagnozowano czerniaka w stadium 4 z powodu bólu pleców.

13 kwietnia 2023 r. – Lithia Springs, Georgia – 2 marca 2023 r. u 28-letniego Peytona Wootena zdiagnozowano czerniaka w stadium 4. Miał jeden cykl immunoterapii, ale rak szybko przemieszczał się z węzłów chłonnych do płuc, wątroby, nerek, kości i tkanki miękkie. Zmarł 5 tygodni po diagnozie 13 kwietnia 2023 roku

16 marca 2023 r. – Atlanta, Georgia – 34-letnia Lindsay Stacy od 3 lat walczyła z czerniakiem. Jednak w ciągu ostatniego roku, gdy była w ciąży z córką, zdiagnozowano u niej stadium 4. Wygląda na agresywną nawrót.

5 stycznia 2023 r. – Suffern, Nowy Jork – 24-letnia Bryonna J. Chapman została przyjęta do szpitala w lipcu 2022 r. w 34. tygodniu ciąży, ponieważ stwierdzono u niej 10-centymetrowy guz zapadający się w jedno z jej płuc. Zdiagnozowano u niej czerniaka w czwartym stadium, co oznacza, że □□wystąpiły przerzuty na całym ciele, w tym na łożysko i prawdopodobnie na dziecko. Miała bardzo niebezpieczne cesarskie cięcie. Zmarła 5 stycznia 2023 roku.

Grudzień 2022 – San Marcos, Teksas – u 25-letniego Jacoba Ricksa zdiagnozowano czerniaka szczęki w stadium 4 (bardzo rzadki nowotwór).

Moje podanie…

Szczepionki mRNA firmy Pfizer & Moderna przeciwko COVID-19 powodują „turbonowotwory”: niezwykle agresywne nowotwory, które pojawiają się w późnym stadium, szybko rosną, agresywnie się rozprzestrzeniają, są oporne na konwencjonalne metody leczenia i mają bardzo złe rokowanie, a diagnoza prowadzi do śmierci, zwykle trwającej od 6 do 12 miesięcy lub mniej.

Pierwsze prace badawcze zaczynają już wspominać o „turbo raku” i sugerują potencjalne mechanizmy. W najbliższej przyszłości napiszę o tym osobny stos.

Pięć najczęstszych nowotworów turbo to: chłoniak, mózg (glejak wielopostaciowy), pierś (zwykle potrójnie ujemny), okrężnica i płuca.

Pierwszą dziesiątkę uzupełniają: białaczki, czerniaki, mięsaki, komórki jąder i nerek.

Szczególna wzmianka dotyczy nowotworów wątroby i dróg żółciowych, jajnika i szyjki macicy.

Skąd wiemy, że od czasu wprowadzenia szczepionek liczba przypadków czerniaka gwałtownie wzrosła?

Dane brytyjskiego rządu dotyczące niepełnosprawności pokazują 72% wzrost niepełnosprawności spowodowanej rakiem skóry w 2022 r. (źródło):

Jedyną kategorią, w której odnotowano większy wzrost w tym zbiorze danych, była „nieznana kategoria podstawowa”.

Nowe osiągnięcia w immunoterapii znacząco poprawiły długoterminowe rokowanie w przypadku czerniaka z przerzutami (źródło 2020 Michielin i wsp.):

Wydaje się jednak, że czerniaki Turbo Cancer w ogóle nie reagują na immunoterapię lub terapię celowaną.
